1.1 Connecting the WII Balance Board – Pairing

The WII Balance Board communicates with the host computer using Bluetooth. It's important to Pair the balance board with the computer before its available for use with KinectLab. The steps below give an overview of pairing the device.

Enable Bluetooth on the computer.

Note: Enabling Bluetooth may vary depending on the vendor and model of laptop. Please see your manufacturers user guide for more details.

Put the balance board in pairing mode. The pairing button is located inside the battery compartment as illustrated below.

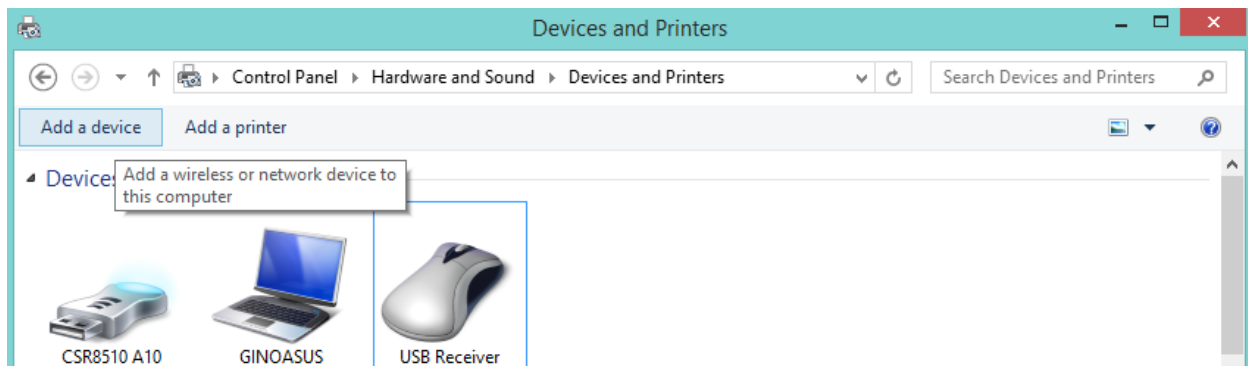

Note: Please hold the pairing button for the duration of the pairing exercise until the device is fully paired.
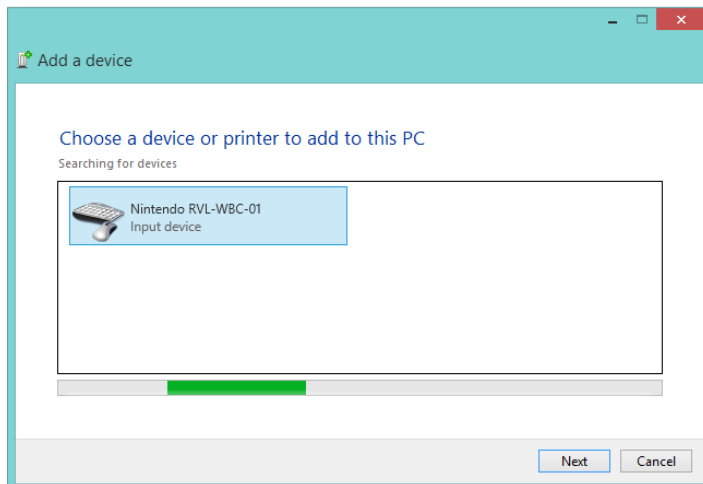

Add a new Bluetooth device.

Open ControlPanel – Hardware and Sound – Devices and Printers

Click Add a Device

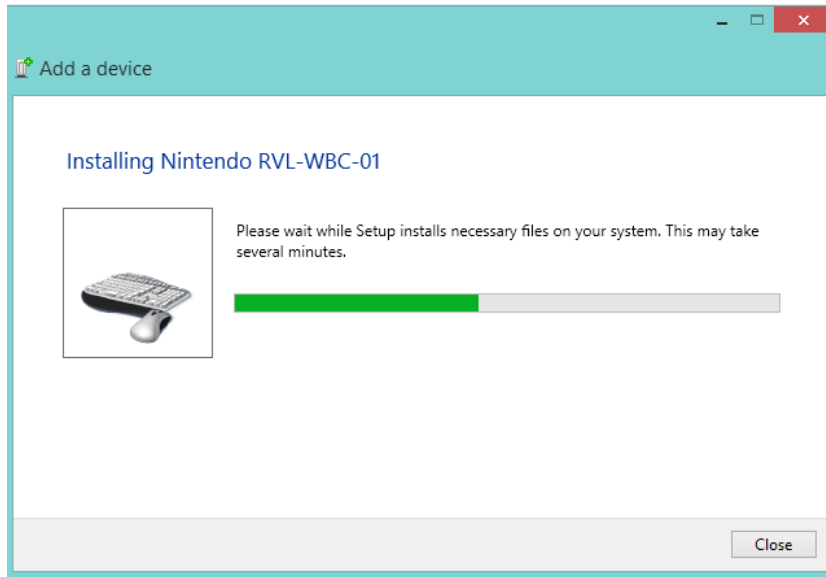

Windows will search for a device.

When the WII device is detected click next.

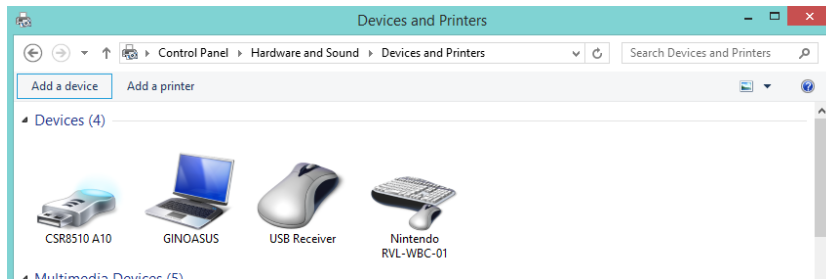

When asked to enter a code, just click next.

Windows will install the required drivers.

Once complete the WII balance board should now be paired.

Note: It may be necessary to repeat this pairing exercise before each session with the WII board.
